NATURAL STONE

SINCE 2007

AAA Natural Stone has mined and marketed natural limestone and sandstone veneer from the company-owned fabrication facility just a stone’s throw from Austin, Texas. AAA also creates and markets an exceptional collection of natural stone veneer from other quarries located throughout the southern U.S.

We fabricate the best of what Texas offers. Natural Stone, Thin Veneer, Cut Stone Accessories, Slabs and Stone for landscape specification. Residential, Commercial, Institutional and Hospitality. Inside or out. All day. Every day.

Our expertise is unmatched. And consistency is the philosophical bedrock of our stone selection. We hand curate every one of our products, so they exceed our customer’s expectations.

It’s not enough to be satisfied with what we have achieved. We continue to strive to find and create products that reach the highest levels of craftsmanship; natural stone that we’d celebrate in our own homes.

BELIEVE IN BETTER. IT’S ONLY NATURAL.

UNCOVERING THE BEAUTY THAT IS TEXAS LIMESTONE Texas geology is distinct. Layered rock exposures contain enormous deposits of Limestone which is a sedimentary carbonate rock primarily composed of calcite and aragonite minerals, and the skeletal fragments of marine organisms.

THE WORLD'S INCOMPARABLE BUILDING PRODUCT Precambrian metamorphic and igneous rock forms the “bedrock complex” underneath Texas. Limestone became the “parent” bedrock below the Texas grassland ecosystem’s soil layers.

4.5 BILLION YEARS AGO
Dust and debris accretion accelerated the metamorphic rock mountain formation associated with large-scale movements of the Earth’s crust.

600 MILLION YEARS AGO
Pre-Cambrian era Texas was the floor of the Panthalassa superocean that surrounded the supercontinent Pangaea and the Gulf of Mexico was a mountain range. Tectonic plate shifts caused Texas to rise while the Gulf of Mexico began to sink.

300 MILLION YEARS AGO
The Pangea land mass continued shifting and separating, and over time, Limestone composed of skeletal fragments and minerals, was deposited as a result of sea level fluctuations.

PRESENT DAY
Limestone is a hard, durable and easily accessible carbonate sedimentary rock. It’s a popular building material for cladding, paving and walls. Limestone is also an admixture for cement, mortar and asphalt concrete, as well as an ingredient used for soil conditioners and paint pigments.

*“Every sunset brings the promise
of a new dawn.”*

Classic Collection

Defining classic architectural style is elusive. Identifying traits and details depends on locale, historic characteristics and aesthetic interpretation among many other attributes. One enduring aspect of any classic style, however, is natural stone. Its use on exteriors and interiors remains unquestionably a commanding testimony of choice.

RUBBLE

THE TIME OF DAY AND THE WEATHER. THE STONE'S TEXTURE AND HOW IT IS INSTALLED. SHADOWS, FULL SUNLIGHT — EVEN MOTHER NATURE'S UNPREDICTABILITY. ALL THESE FACTORS AFFECT THE PERCEPTION OF COLOR. BUT, THESE BEAUTIFUL VARIATIONS ARE WHAT MAKES NATURAL STONE SO ENCHANTING.

“AAA's promise: 'It's Only Natural',
is more than a declaration
of what we sell...it is by definition,
the spirit and soul
of everyone here at the company.”

CHARTER MEMBER

Stone Genesis Group is a natural stone sales and marketing agency that *Uncovers Opportunities and Crushes the Competition*. Become a Member to take your product beyond the quarry floor and your sales to the stratosphere.

Dig deeper for more information:

StoneGenesisGroup.com

AAA Natural Stone will sell stone to users in most climates, if the owner/installer understands and agrees that performance of any natural stone in any exterior installation is the responsibility of the purchaser and their agents. As a natural product, AAA Natural Stone does not ‘engineer’ stone for specific environments and/or applications, so it is the client’s sole responsibility to determine if any natural stone will perform effectively for their purpose. For instance, natural stones that do not test well under many freeze-thaw cycles may do well in a subfreezing climate if there is little precipitation. Performance can also be impacted greatly by factors such as installation orientation (horizontal vs vertical), or the use of sealers to repel moisture or reduce absorption. If you absolutely love a particular type of stone for a particular application, we highly recommend consulting with your architect and/or contractor and reaching out to a company that manufactures natural stone sealers to understand which products and application processes will help your project endure.
